Maths Fun – Measuring fun

What you need: string, rulers (these aren't essential as you can measure with hand spans and your feet)

Choose some items around your house or garden that you can measure. For an extra challenge you could make an estimation first. How long is a book? How many steps does it take you to walk from one side of your lounge to another?

If it is a hot day venture outdoors and see if you can measure a garden chair with your hands or from one side of your garden to the other.
